## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/22/2009 has been entered.

### ***Response to Arguments***

2. Applicant arguments filed 12/22/2009 has been entered.
3. Applicant had amended claims 1, and 14.
4. Claims 1, 2 and 5-16 are pending.

## **EXAMINER'S AMENDMENT**

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert Chisholm on 02/12/2010.

The application has been amended as follows:

Claim 14 (Amended) : Computer software stored ~~in~~ on a computer~~[memory]~~  
storage medium for conducting motion correction for a tomographic scanner including a  
detector array for detecting radiation to generate detector data, wherein the software is  
configured to:

store detector data collected during a data acquisition period, said detector data  
being indicative of:

- i) directions along which radiation is detected; and
- ii) quantities of radiation detected in different of said directions;

store movement data representing movement of the subject during the data  
acquisition period; and

motion correct said detector data using said movement data and a motion  
correction algorithm to calculate motion corrected detector data,

wherein said motion correcting step comprises processing said detector data by

a) realigning directions of at least some of said detector data on the basis of said  
movement data; and b) altering quantities of at least some of said detector data on the  
basis of said movement data,

such that at least some of said detector data are both realigned and altered in  
quantity,

wherein said altering quantities step comprises calculating estimates of first  
detector data based on second, different, detector data:

characterized in that said altering quantities step comprises either: selecting  
whether to scale an original detected quantity of said first detector data upwards or to

Art Unit: 2624

replace the original detected quantity of said first detector data with a said calculated estimate; or

altering the original detected quantity of said first detector data so that the altered quantity takes into account both the original detected quantity and a said calculated estimate

Claim 15 is cancelled

***Allowable Subject Matter***

6. Claims 1-2, 5-14, 16 are allowed ( now renumbered claims 1-13).

The following is an examiner statement reasons for allowance. Each of Independent claim 1, 14 and 16 are allowed over the prior art of record because the Examiner found neither prior art cited in its entirety, nor based on the prior art, found nor motivation to combine any of said prior art which teaches an altering quantities step comprises calculating estimates of first detector data based on second, different, detector data, characterized in that said altering quantities step comprises either: selecting whether to scale an original detected quantity of said first detector data upwards or to replace the original detected quantity of said first detector data with a said calculated estimate; or altering the original detected quantity of said first detector data so that the altered quantity takes into account both the original detected quantity and a said calculated estimate. The invention avoids the noise artifact due to the rescaling LORs having very low readings thus providing an improved method of motion correction in tomographic

Art Unit: 2624

data processing. No other found prior art of record teaches or fairly suggests the combination of claimed elements.

The Examiner finds no reason or motivation to combine the above references in an obviousness rejection thus placing the application in condition for allowance.

Any comments considered necessary by applicant must be submitted on later than the payment of the issue fee and to avoid processing delays should preferably accompany the issue fee. Such submissions should be clearly labeled, comments on statement of reasons for allowance.
